

Product Overview & Applications

The Cellular Phone Signal Booster is a very powerful signal amplifier, for persons who are affected by weak signals on mobile networks anywhere in the world, yet it is so small and lightweight that it can fit in the palm of your hand. The applications of boosters are endless. Mate them to Mobile Phones, PDA's, Wireless PC Cards, CDPD Modems, in-vehicle Hands Free Kits or GPS Tracking equipment. It will BOOST a weak signal from the cellular network, thus allowing you to make a connection in places where you could not before. Improved signal strength means faster data transfer-rate speeds on all your communication devices and crisp voice quality on your mobile phones.

Product Features

The Cellular Phone Booster is so versatile, that removal from your vehicle to your office, to your vacation home or RV can be done in a matter of minutes and by anyone. The Do It Yourself Installation is extremely simple! The Cellular Phone Signal Booster is also compatible with any cellular phone or device operating on the cellular network and any technology. (PCS / GSM / CDMA / TDMA / CDPD / iDEN / D-AMPS)

Product Benefits:

Mobile phone users who previously had to walk outside to answer their cellular phone, can now sit in the privacy, comfort and security of their homes or offices and complete a crisp clear conversation with the help of the Cellular Phone Signal Booster.

It can also be used in vehicles, for persons who encounter dead spots while driving through poor reception areas and for the boat or yacht owner who wants improved reception while out at sea or just relaxing in a cove, the Booster now affords you a sure way of contact.

You no longer have to leave the safety and security of your home or office, sometimes at very late hours to receive or make a cellular call. You can now feel safe knowing that help is a call away, even if you are located in a poor reception area. The Dual Band Cellular Phone Signal Booster ensures that your line of communication will be there when you need it most.

Installation Options:

Simply provide us the model phone or the type of device you hope to incorporate the use of our booster with and we can supply you all the necessary connectors and patch leads needed to complete your installation. This signal amplifier can be mated to:

- Mobile Phones – Improves voice quality and extend network coverage
- Wireless PC Card Modems – Improves data transfer speeds and extend network coverage
- Hands Free Kits - Boost signal strength when docked in the phone's cradle.
- CDPD Modems – Ensures secure data transfer.
- GPS Tracking Equipment – Improves signal and extends range on cellular uplink for live tracking.
